

# Domestic Leased Line Connectivity

Intercity fiber connectivity within Nigeria for Business & Enterprise Customers

## **Product Description**

Suburban Broadband's Domestic Leased Line Capacity is a permanent, private and reliable connection between two locations. It is a dedicated private line that interconnects companies rapidly with their local and international branches and partners. It only carries communications and traffic from your company, resulting in a no-delay, guaranteed level of service. The line can be used for faster transfers of data, video and voice and is most effective when sharing bandwidth hungry applications between different offices/branches.

Suburban Broadband's DLLC offers connectivity across a majority of the southern cities of Nigeria and extends to the north as far as Kano. Suburban has extensive coverage in cities such as Lagos, Abuja, Benin, Port Harcourt and Kano. Local access to the customer site is achieved using Suburban fibre connections or via local partners. We also have strategic partnerships with Intel, Alvarian or Cisco.

## **Suburban Broadband's DLLC is available in the following line speeds (depending on specific route)**

- 2 Mb/s (E1)
- 45 Mb/s (DS-3)
- 155Mb/s (STM-1)
- 622Mb/s (STM-4)
- 2.5Gb/s (STM-16)

## **Suburban Broadband is your single interface for all elements of the service. For the customer this has definite benefits**

- A 24 hours per day customer enquiry service is available in each country
- Composite price for end to end service
- A single contract

## **Key Benefits of the Suburban Broadband DLLC**

- Reliable and secure connections
- Cost effective
- Seamless communications
- Flexibility
- Simpler pricing and budgeting
- Single contact, single contract
- Perfect fit
