

IP Transit (IPT)

Wholesale Internet connectivity for Business & Enterprise Customers

Product Description

Suburban Broadband's IPT is a one-to-many broadband service delivered over a 10 Gigabit backbone connection that enables you to develop and provide global connectivity to an unlimited number of end users over an IP-based network. It provides speed, rock-solid dependability, flexibility and route efficiency through the IP backbone.

This solution provides customers the opportunity to purchase wholesale internet services and distribute this capacity into their network utilizing their existing infrastructure and is designed specifically for Business & Enterprise Customers. Suburban IPT is available everywhere the Suburban network extends to.

The Suburban Broadband's network offers connectivity across majority of the southern cities of Nigeria and extends to the north as far as Kano. Suburban has extensive coverage in cities such as Lagos, Abuja, Benin, Port Harcourt and Kano. Local access to the customer site is achieved using Suburban fibre connections or via local partners. Suburban also has strategic partnerships with Intel, Alvarion and Cisco.

Suburban Broadband IPW is available in different capacity speeds ranging from 2 megabits to 155 megabits.

Suburban Broadband is your single interface for all elements of the service. For the customer this has definite advantages

- A single contract
- 24 hours per day customer enquiry service is available in each country
- Composite price for end to end service
